

FT-178 Rustic Spa Fountain with Planter Revised March 9, 2018
(3 pieces)

COMPONENTS AND PARTS LIST

FT-175A
7.5" dia X 9.5" H
22 Lbs

FT-175B
8.25" dia X 4.25" H
10 Lbs

P-580
18" dia X 4.75" H
38 Lbs

NOTE: Component photos are not to scale

Fountain holds approximately
.75 gallon(s) of water

No cover available for
this fountain

Pump Kit Parts List

PK120 pump (1)
#7 M-Series stopper (2)
Approx. 8" length of 1/2" black non-kink tubing (1) **
Approx. 2" length of 5/8" clear tubing (1) **
Hose clamps (2) Note – Hose clamp may be used as flow restrictor
Adhesive Dots (4)

FT-178 Rustic Spa Fountain with Planter (3 pieces)

Revised March 9, 2018

ASSEMBLY INSTRUCTIONS

1. Make sure you are assembling your fountain on a level surface capable of holding a minimum of 76 pounds with approximately a 1 ¾ square foot footprint.
2. Place the adhesive dots on the bottom of the planter (P-580) to protect furniture surface that fountain is to be placed on.
3. Position the Planter where the fountain is to be installed, ensuring that it is level.
4. Feed the pump cord all the way through the hole in the basin (FT-175B).
5. Leave enough cord inside the basin so that you can work with the pump, but not so much that it fills the pump well.
6. Fit cord into stopper.
7. Press stopper firmly into the hole of basin.
8. Repeat steps 6 – 7 with the planter basin.
9. Place the basin into the planter assuring that it is centered and level.
10. Make sure the appropriate enclosed fitting (1/2" diameter) is inserted into the pump water outlet.
11. Place a hose clamp over the 1/2" end of the tubing assembly.
12. Insert that end of the tubing onto the pump water outlet and tighten the clamp.
 - a. Note – one of the hose clamps may be placed on the tubing prior to installation as a flow restrictor if necessary
13. Place another hose clamp over the 5/8" end of the tubing and insert that over the copper pipe protruding down from the bottom of the water feature.
14. Place the water feature (FT-175A) over the pump into the basin.
15. Fill basin with approximately 3/4 gallons of water.
16. The planter can now be filled with soil and planted.

FT-178 Rustic Spa Fountain with Planter (3 pieces)

WINTER CARE AND GENERAL FOUNTAIN INSTRUCTIONS

- W I N T E R C A R E -

Fountain bowls/tops and other fountain components, which collect water, should not be left outside in the winter since any component, which fills with water and freezes may crack. Likewise components such as pedestals, which remain in a basin, filled with water, which then freezes, may also crack or crumble. Ideally, therefore, a fountain should always be stored indoors or in a dry protected place such as a covered porch away from the elements. However, if a fountain must be left outside:

- (1) Remove pump, rubber stoppers, drainpipes, finials, and other small components for storage indoors. Note that stoppers or drainpipes are removed to allow drainage in the event water accumulates in any basin.
- (2) Raise fountain base from ground with wood strips so that base will not freeze to the ground surface.
- (3) Cover or wrap the fountain with burlap or other absorbent material (old blanket or towel) and then cover securely with plastic, making sure that water will not accumulate in the basin or other fountain component and freeze;
- (4) Check fountain periodically to insure that plastic is secure and water is not accumulating in any fountain component.

- G E N E R A L F O U N T A I N T I P S -

Install fountains on a level surface. You will need a properly grounded 110-volt (AC only) GFCI protected receptacle near the fountain for your pump. All pumps are submersible and must be completely underwater to function properly. Test all pumps and adjust to full output prior to assembly. It is not recommended that fountains be placed directly on grass or dirt. Position the channel opening at the base of each fountain toward the electrical outlet to be used since the pump cord will be threaded through this opening.
